## White paper

Revision v.1 May 2021

# ALIENS MOON

## Abstract

Aliens Moon will change the world through the use of Blockchain Technology. We have a unique concept which we have integrated into our Decentralized Finance, as you are aware the crypto world brought a revolution in the last few years. It is developing into one of the world's major players within business, finance, and investment.

## Disclaimer

This document is issued by Aliens Moon. It is a conceptual paper that is envisaged to form the economic basis for the establishment and creation of a crypto-economic token to be known as Aliens Moon token.

Nothing in this document or any of the information or proposals set out herein or in any papers or materials referred to shall form the basis of any contract between Aliens Moon (or any of its holding companies, subsidiaries, associated undertakings or controlling persons, or any of its respective directors, officers, employees, agents, representatives, partners, or advisors) and any other person whatsoever.

Without limitation to the foregoing, no representation, warranty, or undertaking, express or implied, is made and no responsibility is accepted by Aliens Moon as to or to:

A. The completeness or accuracy of this document or the proposals, information, formulae set out in this document whether expressly or via a link to other material our website

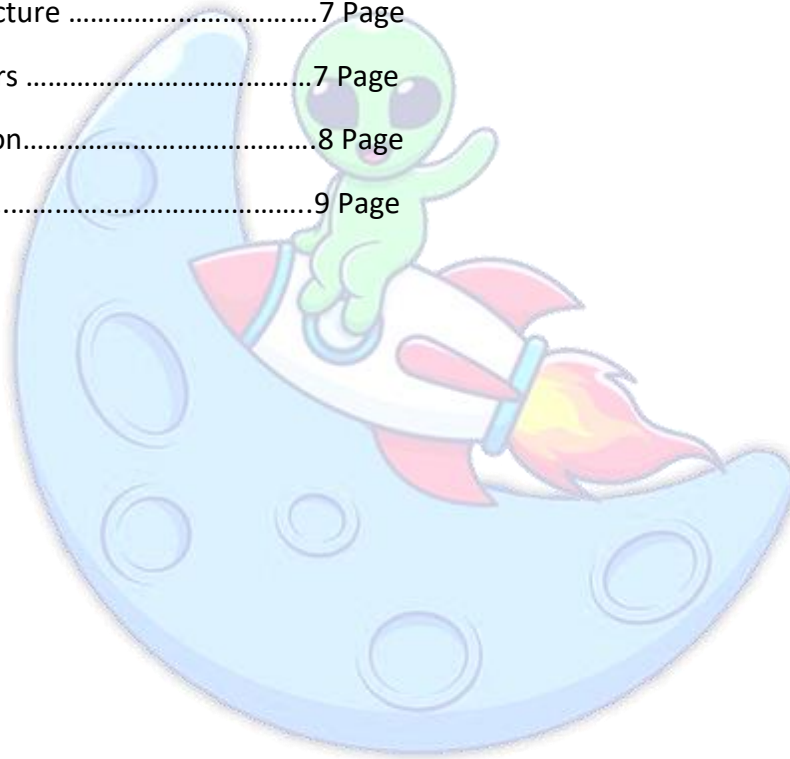

B. The reasonableness with anything of any assumption.

C. The accuracy of any predicted or unpredicted behavior of any algorithm, function, or system contained therein, including, without limitation, in respect of future funding needs and concerning limitations in the performance of any systems, performance or ledgers described here.

D. Although ALIENS MOON is an EXPERIMENTAL token for social experiment. It is not a digital currency that's why the team strongly recommends that people from United States do not purchase it because the team cannot ensure compliance with United states regulations. Always make sure that you are in compliance with regulations and local laws before you make any purchase.

# ALIENS MOON

## Introduction

Decentralized finance (DeFi) is a fast-growing sector of the cryptocurrency world. While cryptocurrency coins are creating a decentralized store of value which separates it from any government-backed fiat currency, DeFi is creating decentralized financial instruments which are separated from traditional centralized institutions.

Although still small when compared to the global economy, DeFi has seen rapid growth in the last few months. In early 2019, there was only \$270M of crypto collateral locked in the DeFi economy. By February 2021, that number had grown to \$3B, and it has continued to grow impressively throughout the year.

This growth shows that the crypto community takes significant interest in DeFi, but it's still a small enough sector that many outside the industry may not have heard of DeFi yet. So, let's have a look at what DeFi is, and why it is so exciting.

### **DeFi: What and why?**

To be considered Decentralized Finance, a financial platform must have one or more decentralized features or functions. These often take the form of using DLT (distributed ledger technology) rather than recording things in a centralized fashion; decentralized governance of the platform in the hands of the token holders instead of a ruling board; the use of decentralized information feeds and algorithms to find out things such as currency values and interest rates. Most DeFi platforms take the form of Dapps. These Dapps use different smart contracts to make financial transactions automatic, faster, more efficient, and often more affordable than centralized counterparts. is inherently neutral.

Automation is allowed for few interesting financial instruments not seen in the traditional, centralized financial sector i.e. "flash loans", it is a unique form of loan that must be withdrawn and paid back within a single transaction. Across different platforms, and then pay back the amount borrowed, all in moments. Active traders can use this to make a fast profit and take advantage of market fluctuations.

DeFi is giving people several interesting ways to use their assets and more control over money. Many DeFi projects have an aim to make trading and investment more accessible, with lower minimum investments and platforms which are easy to use from any smartphone with an internet connection, regardless of your geographical location.

## Project Overview

Aliens Moon is a Deflationary and frictionless yield farm token built on Binance Smart chain. Our protocol applies 6% fee to each transaction and the fees are instantly split and distributed as rewards / dividends among all token holders. 2% gets split between holders, 2% Auto liquidity , 1 % Aliens Lottery and 1% burned which means that the supply will be decreasing continuously generation yield for our holders.

## The Problem

Mostly DeFi projects have been built on the Ethereum Blockchain that increase the power of network effects and enhance the security of the protocol. Although, this has also led to the appreciation of the ETH price which has skyrocketed Ethereum transaction fees. As a result, Ethereum Ecosystem is becoming a pay-to-win network that can be accessible by the wealthiest people.

Faced with the complexity and difficulty of making money in times of crisis. We have decided with our development team of engineers to provide a sustainable solution over time in the face of inflation. First, we decided to develop a cryptocurrency that rewards users and is deflationary over time. In a second step we want to set up a smart contract during the second half of 2021 to allow our investors to stack their token even more and give rewards. We are a development team working hard to bring a full Defi eco system.

## The Solution

Built on Binance Smart chain results in low transaction fee. holders can receive dividends from each transaction without any additional gas fees which will directly come to their wallets in real time. Cryptocurrency is indeed the best investment. For the first time, investors from all over the world can buy a reflected token through fully compliant, fractional, tokenized ownership. Powered by blockchain. Our solution allows access to yields and rewards. Through the community we will be able continue the process to invest together. We wish to democratize the access to cryptocurrency investment.

## Use Case

Alice and Bob want to buy their dream house or to buy any asset, but the bankers have declined their application. They have limited funds available and with that they can't afford to have their dream. They both believed in the underlying technology of cryptocurrencies and believed the mid and long-term growth of the asset class .

Both have been paying attention to Defi and all the new Yield farming high APY returns that they could earn These potential earnings may be short lived but are real for the time being. they noticed there was a high transaction fee and to claim rewards or to stake they were using a web interface.

How do both take advantage of Aliens Moon?

Aliens Moon applies a 6% fee to each transaction and the fees are instantly split and distributed as rewards / dividends among all token holders. 2% gets split between holders and 1% burned which means that the supply will be decreasing continuously. Aliens Moon utilizes the latest protocol advancements on the bleeding edge of blockchain and smart contract tech and is laser focused on efficient, fast & frictionless yield generation for id holders

Just holding on wallet, holders receive dividends with each transaction without any additional gas fees and directly to their wallets in real time. Aliens Moon is 100% decentralized and secure on the binance smart chain. There is no interface or website required to claim rewards or to stake your tokens. None of the vaults could be hacked or treasury funds that could be stolen or sold.

 **2% Redistribution reward to holders**

 **1% Burn on every transaction.** 

 **2% Auto Liquidity**

 **1% Alien Lottery, every day fund will be given to one lucky Alien.**

## Protocol Architecture

The protocol has been designed as a fork codebase of RFI and modified to enable better features

We also have an added advantage of locking the liquidity for user protection, all adviser tokens will be placed in time locks smart contracts. Tokens will be distributed monthly and transparently. All smart contracts will be audited to guarantee safe and secure code now isn't that a breath of fresh air? as a full defi protocol a range of services does not end.

## Our Features

### NFT'S:

Non-Fungible Tokens (NFTs) are the distinctive crypto assets that carry unique information and are non-interchangeable and indivisible. In essence, the uniqueness of the data stored inside the NFTs makes them non-interchangeable. Moreover, a user cannot share a portion of their NFT with someone else over the blockchain network due to its indivisibility feature.

- Art
- Collectibles
- Virtual assets
- Gaming
- Identity

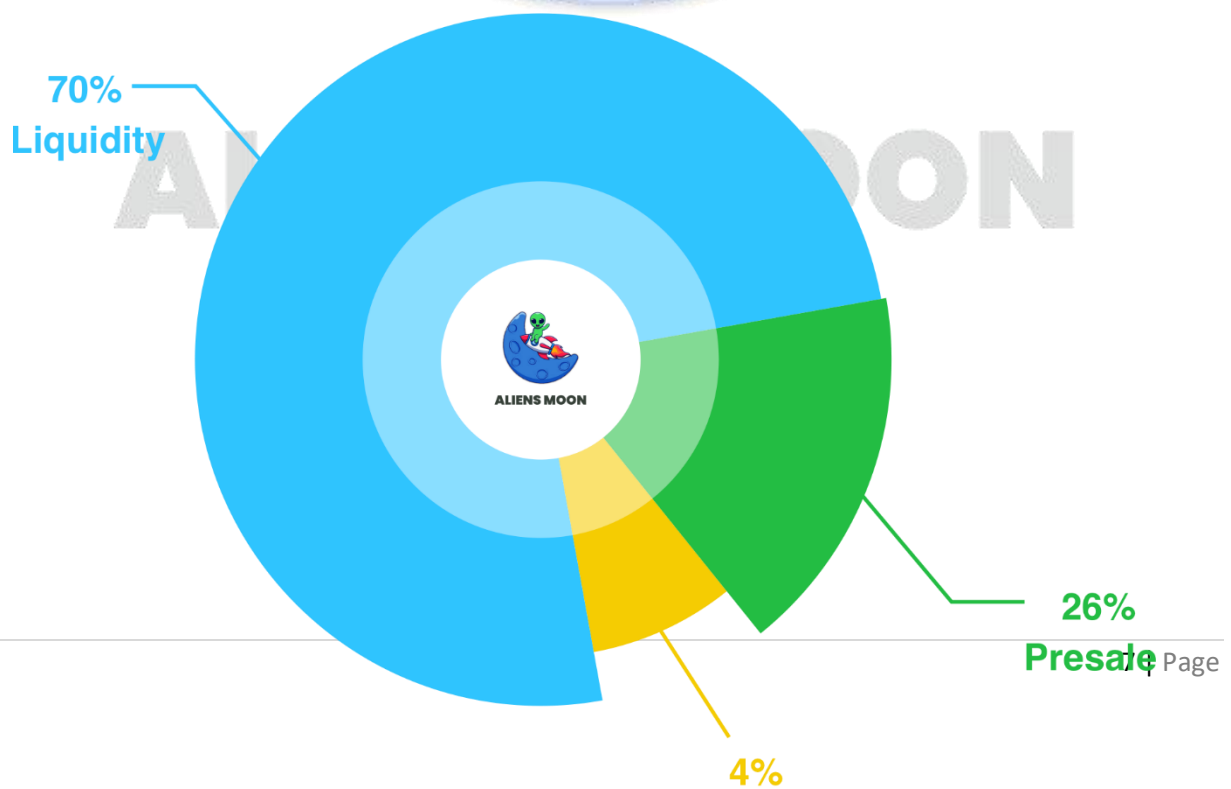

## Token Parameters

**TOKEN Name: ALIENS MOON**

**TOKEN Symbol: AMOON**

**TOTAL Supply: 1,000,000,000,000**

**Token Network: BSC**

# ROAD MAP

- Launch to BSC Mainnet
- Initial launch to BSC Mainnet will take place on June 2021.
- Multiple Audits
- Audits will be applied for & completed by several well-known auditing groups and individuals.

- Coingecko & CoinMarketCap
- Multiple Listing services including but not limited to, Coingecko & CoinMarketCap will be applied for.
- Strong marketing strategy for growth
- HODL Rewards
- Strategic Connections

- Major Exchange Listing
- Apply for multiple major centralized exchanges
- Futures Trading and Project Development

Phase 1 – 2021

Phase 2 – 2021

Phase 3 – 2021

# Conclusion

Aliens Moon protocol brings new model of yield farming, it is one of the innovative Defi project, there is a great hop for the success of this project which brings added value in Defi space.
